New technology in repairing pipe is opened by JW Coupling

Seoul, Jun 11, 2018 (Issuewire.com) - MP JOINT takes rank with other popular brands globally, thanks to its good quality and reasonable price. We export 70% of our production to 40 countries including Japan, Singapore, Australia, UK, France, Spain, Norway, the Netherlands, and USA under “MP JOINT” or by ODM. In Korea we supply couplings to many big and small companies. We will continue to improve our products and develop new products in order to help your piping work. Please keep your interest in our company and products.

Hinge Type

Hinge Type Clamp has a hinge at the opposite side of the lock, and this enables you to open the joint and cover the damaged part of a pipe easily and quickly.

Bolt-rotating hinge type

This is the upgraded version of MJH, the Hinge Type Repair Clamp. You can lock the clamp up by simply swiveling the bolt one end of which is already inserted into the bar nut, fitting into the bar washer, and bolting up. The process is very simple and shortens working time more than 30% compared to MJH.

- Now is on preparation of mass-production.
- Please refer to standard of MJH(hinge type).

Multi lock type - 2 locking parts

These clamps are composed of two, three, or four separate slides with locks at each ends. So, they have better tightening and wider range of allowable OD, and it is easy to install even at large diameter pipes. They are also used for new connection or partial replacement of a pipe.

Single lock type

The most basic repairing product. It is more comfortable if you use clamp tool during installation.

Elbow repair clamp
Elbow Repair Clamp is useful for repairing damaged or leaking area on elbow or covering welded part to protect it. This is top-bottom separated type, like MJD.

Looking solution for pipe connection repair korea? Jeong woo coupling, we are a leading solution provider by supplying pipe leakage repair clamp in Korea. Hinge Type Clamp has a hinge at the opposite side of the lock, and this enables you to open the joint and cover the damaged part of a pipe easily and quickly.
