Ashtar Trade Test & Technical Training Centre — Welding Training in Multan, Pakistan

Multan, Punjab Nov 12, 2026 (Issuewire.com) - Technical Training Institute in Pakistan — Ashtar Trade Test

Ashtar Trade Test & Technical Training Centre (Ashtar TTC) is a technical training institute in Multan, Pakistan, founded in 2021. The centre trains skilled workers for local industry and for overseas jobs in

the Gulf, with hands-on practical training, trade-test preparation, and Job Placement Assistance.

Courses We Teach: 6G Welding (SMAW / TIG / MIG) — flagship welding programme covering stick, TIG and MIG welding in all positions, including the demanding 6G pipe position that Gulf employers test for. Electrician — house wiring, industrial wiring, motor control, and electrical safety, taught on live boards and panels. Pipe Fitter — pipe layout, cutting, threading, fitting and erection, with training in reading isometric drawings. Pipe Fabricator — fabrication of pipe spools, supports and structures from drawings, including cutting, fit-up and tack welding. Mechanical Fitter — fitting, alignment, bearings, pumps and rotating equipment maintenance. HSE (Health, Safety and Environment) — workplace safety, hazard identification, permit-to-work systems and safe working practices required on Gulf project sites. Civil Surveyor — land surveying with total station and level instruments, setting out, and quantity measurement for construction work.

Trade-Test Preparation: Most Gulf employers hire through a trade test — a practical test of the exact skill they need. We prepare students the way the test is actually run: timed practical tasks on the same equipment, mock tests under test conditions, and correction of every fault before the real test. Our trainers have prepared candidates for employers and test centres across Saudi Arabia, the UAE, Qatar and Oman.

Training for Gulf Jobs: Our training is built around what Gulf employers ask for: the 6G welding position, pipe fitting to drawing, electrical installation to standard, and HSE awareness. We also guide students on documents, medical requirements and the recruitment process, and we offer Job Placement Assistance to help trained students reach overseas employers.

How to Enrol: Visit the centre in Multan, call us, or message us on WhatsApp. Bring your CNIC and educational documents. Courses run in batches; seats are limited because training is practical and hands-on, with small groups per instructor.
