

SLEECOIN Announces The Launch of Online Platform and ICO

Decentralized online platform, SLEECOIN, looking to connect Hosts and Guests in the shortterm rental of real estate with the launch of cryptocurrency platform and initial coin offering

London, Aug 20, 2018 (Issuewire.com) - SLEECOIN is a decentralized online platform developed with the objective of reducing the traditional transaction fees as well as removing the risks related to data management while ensuring the flow of information is transparent and accurate. SLEECOIN has announced the launch of its platform and the initial coin offering of the SLEE token, all in a bid to make the real estate industry more effective.

The Blockchain technology has become increasingly popular in recent times, with different industries trying to integrate it into their operation in order to harness the benefits of the technology. Some of the problems faced in the short-term real estate market include high commissions of up to 20% of the total cost of rent and the use of traditional payment methods, that results in additional variable costs up to 3% that add to the cost of currency exchange. This makes the different stakeholders in the market spend more than they ordinarily should, consequently inhibiting the growth of the market.

SLEECOIN is consequently coming up with a unique project, using the Blockchain technology to ensure transactions and data management safely, and offer to the user a unique experience in management and reservation of short-term properties.

The proceeds of the token sales will be used for Software development, Ecosystem development, Legal and general expenses, and Marketing and Community.

SLEE token will be released on the basis ofEthereum platform and will be compatible with third-party services, wallets, and exchanges while ensuring easy integration.

More information about the revolutionized short-term rental Platform and the ICO can be found on the [website](#) and [whitepaper](#). SLEECOIN is also available across several social media platforms including [Facebook](#), [Twitter](#), [Telegram](#), and [LinkedIn](#).
