Foresight continues its partnership with Pibit AI as time to quote falls from 12 days to 2

The workers' compensation MGA now clears submissions in 30 to 37 minutes on average, and each of its underwriters handles 190% more submissions than before.

South San Francisco, California Nov 4, 2026 (Issuewire.com**)** - Pibit AI, the AI Underwriting OS for commercial, specialty and E&S insurance, today announced that Foresight Risk and Insurance Services, a San Francisco based managing general agent writing mid-market workers' compensation for safety-critical industries, is continuing its partnership with Pibit AI as it expands into new industries. Foresight uses Pibit AI for intake and clearance, document extraction and external research, with qualified submissions delivered into Foresight's own database for use in its underwriting workbench.

Foresight writes workers' compensation for construction, agriculture and manufacturing businesses, and wraps proprietary risk management technology and services into every policy, reducing claims frequency by 17% on average. Much of its book is distressed risk. Foresight looks at accounts other carriers decline, identifies the causes behind an unfavourable loss history and works with the insured through the policy year to change it. Alongside its safety-focused program, its value proposition to brokers is fast turnaround on complex accounts.

That model depends on underwriters being able to look at every submission. Before Pibit AI, each incoming file had to be opened by hand, checked against Foresight's guidelines for appetite, completeness, duplicates and knockout questions, and chased with the broker for anything missing. With limited hours available for that work, submissions had to be prioritised, and some accounts were never worked.

Today clearance averages 30 to 37 minutes, and full document processing takes about an hour and a

half compared with roughly three hours before. Time to quote has fallen from 12 days to 2, and submissions handled per underwriter are up 190%. Foresight clears around 4,600 submissions and fully processes around 4,000 each year, and now works every submission it receives.

"We are investing in automation to set a new standard for speed and simplicity in commercial insurance. Our agency partners are already experiencing the impact—and we see this as the foundation for how business will be done," said David Fontain, CEO of Foresight.

"Our pipeline is getting so efficient that we will soon be able to provide either a pricing indication or quote on all deals within a few days and in the best cases, a few hours," said Peter Grant, Founder and Head of Product at Foresight.

Every submission is checked against Foresight's own appetite, completeness, duplicate and knockout rules before it reaches an underwriter. Missing items are chased with brokers automatically on a schedule that tightens as the effective date approaches, every seven days when the date is more than thirty days away, every five days between fifteen and thirty days, and every two days inside fifteen days. Extraction from loss runs, ACORDs and supplementals is held to 99.9% workflow accuracy under SLA, with every field validated before delivery.

"Foresight writes the accounts other carriers pass on, and that only works when their underwriters get to see every one of them. Taking time to quote from 12 days to 2 while they move into new industries is the result we want for every MGA we work with, and we are glad to keep building it with Peter, David and the Foresight team," said Akash (AK) Agarwal, Founder and CEO of Pibit AI.

About Pibit AI

Pibit AI is a Y Combinator-backed insurtech company based in the Bay Area. Pibit is the AI Underwriting OS for commercial, specialty and E&S insurance: its AI agents run underwriting from submission to quote, so underwriters spend their time only on decisions and broker relationships. Carriers and MGAs start with one module or take the full OS, inside the systems they already use, with 99.9% workflow accuracy with our human-in-the-loop, guaranteed in the contract. Pibit works with 50+ carriers and MGAs across 10+ lines of business, delivering a 20% increase in hit ratio, 2x underwriter capacity and 70% less time to quote.
