Mango AI Debuts a PPT to Video Converter With Editable Narration

Mango AI's new PPT to video converter turns PowerPoint slides into narrated videos, with AI-generated or manually written scripts that users can edit for each slide.

Hong Kong, Hong Kong S.A.R. Nov 27, 2026 (Issuewire.com) - Mango AI, developed by Mango Animate, has launched a PPT to video converter that turns PowerPoint presentations into narrated videos with optional digital presenters. It extends the use of existing slide decks beyond live presentations, without requiring users to film themselves or record a presentation session.

An onboarding project might draw on a company introduction and a separate presentation covering department-specific procedures. Users upload these PowerPoint files one at a time and select the slides to include, with each additional import appended to the same project.

The PPT to video converter supports AI-generated narration drafts and manual script entry for each imported slide. Each slide's script remains editable, allowing users to add context, explain a process, or clarify terms. The script generation settings include a choice of language, while the narration voice is selected separately.

The voice library includes language, gender, and age filters, with regional variants available for languages such as English and Spanish. Audio previews are available before voice selection. Background music is optional, with tracks organized into categories such as Ease, Serious, and Tech.

For the visual presentation, the PPT to video converter offers templates ranging from notebook-style

designs to animated scenes, with image and video background options available in some templates. The avatar library provides human presenters, circular portraits, and cartoon characters with adjustable size and position in the editor, along with a No Avatar option.

Subtitle settings include a choice of styles and adjustable positioning, allowing captions to be placed away from diagrams or other slide content. Subtitles can also be turned off. Output settings include 16:9 landscape and 9:16 portrait formats, with 720p and 1080p resolution options.

Completed videos can be downloaded as MP4 files or shared through a link. Beyond onboarding, potential uses include product briefings for sales teams or customers and lesson recaps for students revisiting topics outside class.

"Slides often contain the main points, while the fuller explanation comes from the person presenting them," said Winston Zhang, CEO of Mango Animate. "Our aim is to help users bring that explanation into a video, with control over what the narration says and how much detail it includes."
