

Fascinating book explains how to build a time machine

Science fiction and time travel fans will soon have something new to enjoy.

Phoenix, Sep 12, 2018 ([Issuewire.com](http://www.Issuewire.com)) - A fascinating book being funded on Kickstarter is gaining attention from science fiction fans.

"How to Build a Time Machine" is a marvelous book project on the Kickstarter crowdfunding website. The book is currently the most backed fiction project on site and is already more than 300% funded. The book goes to the printer in October and less than 2 weeks remain to reserve an early edition copy of the book.

This book provides an enormous amount of intriguing information about time travel, self-resolving temporal causality, artificial and anti-gravity, an alien civilization called the Luyteni, fusion power generation, and, of course, detailed instructions on how to build a time machine.

The book is written from the perspective of two New York journalists who are contacted by one John J. Clifton, a "temporal specialist" from the year 2151. In addition to first-person interviews, Clifton provides future historical data files and participates in a technical interview with a physicist and a mathematician.

Readers who enjoy true science fiction and contemplating the possibility of time travel will enjoy this work immensely.
