

Top two Strains that support healing for Medical Marijuana Patients in Los Angeles

Los Angeles, Sep 19, 2018 (Issuewire.com) - We at Strainbank LA totally get it. We've heard from so many Medical Marijuana Patients searching for insight on their journey to finding the right combination of clones in Los Angeles. Our mission at Strainbank LA it to serve our patients with the top marijuana clones. Our collective offers verified marijuana clones in Los Angeles. Our team at Strainbank LA doesn't want to see another patient wait one more day to feel great about going "green" when it comes to their medical marijuana needs.

In the interest of serving the Medical Marijuana Patients community, we have come up with a cheat sheet to share highlights of the marijuana clones that will easily support healing.

Top two Strains of healing clones in Los Angeles

Sativa Marijuana Clones in Los Angeles- This strain is the perfect daytime medication. Designed to treat cerebral ailments, includes a high THC content (effective for shrinking tumors) while offering an uplifting and energetic experience.

Indica Marijuana Clones in Los Angeles- A strain ideal for a nighttime medication regiment. Effective to treat body system conditions. Incorporates a high CBD content which allows for relaxation and serenity. Working with an LA clone that contains this high concentration of CBD also supports in more successful sleep cycles, allowing the patient to wake feeling rested.

Superior Cannabis Genetics: Marijuana Clones in LA

Here are some additional elements to consider when working with clones as a part of your medical marijuana treatment plan.

LA Clones. Here are some highlights of the growing process. Look for the growers that will follow a very simple cultivation process. Depending on the strain, marijuana clones in LA can take approximately 10 - 14 days to root well. Each new tray should be labeled with a date and monitored until roots emerge and the clone passes a light "tug test". Simple growing methods ensure the patient will always receive properly rooted marijuana clones in LA. All marijuana clones should be rooted into Rapid Rooter plugs and should be approximately 3-4" tall.

LA Pre-Teens. LA Clones with excessive roots require additional water & nutrients. These clones are more susceptible to experiencing transplant shock in the soil. To avoid any problems, we suggest patients look for mature LA clones that are transplanted into 4" Grodan cubes. So, they can then be offered to patients as LA pre-teens. LA Pre-teens are grown under Metal Halide (MH) lamps for a full week with a light solution of Aptus Plant Tech nutrients and should grow to be approximately 8-18" tall.

Strainbank LA was established in Spring of 2009 and is the only collective offering verified cannabis genetics, originating from International Seedbanks. Which means, that all our varieties of marijuana clones in Los Angeles are offered with their phenotypes preserved. Our Strain Menu is a collection of flowering seeds, of which top genetics were identified and amplified within our LA clones.

Strainbank LA urges Medical Marijuana Patients to stay committed to their research. As a final thought,

know that the team at Strainbank LA is here to support. We understand the needs of our Medical Marijuana Patients.

Don't slow the healing process down with undue stress. Call our LA clones team today. We are here to help you heal green!
