

Exalto Emirates exhibits at the 2018 Abu Dhabi International Boat Show.

Sharjah, Oct 16, 2018 (Issuewire.com) - On the first [Abu Dhabi International Boat Show](#) held at the Abu Dhabi National Convention Center from October 17th through 20th [Exalto Emirates LLC](#) will be partnering up with Abu Dhabi Shipbuilding as both companies are sharing a single stand showcasing their individual strengths and products to the market.

In particular, Exalto Emirates will focus on the introduction of the [Neander Shark Dtorque 50 HP Diesel outboard](#) which was designed to revolutionize the small boat market where its expected lifespan of well over 10,000 hours at least doubles that of any comparable outboard gasoline engine. The Dtorque 111 offers a remarkably smooth and quiet diesel engine, delivering 50 hp at the propeller with a stunning torque output of 111 Nm at just 2,500 rpm. This is considerably better than the latest 70 hp 4-stroke gasoline models and more than enough to quickly accelerate most small craft onto the plane with plenty of low-down lugging power for heavy displacement duty. A typical application within the leisure boat market is for use onboard small yacht tenders removing the need for carrying petrol on board the yacht and thus reducing insurance costs.

Also on the show, the recently launched remote operated rib from Securmer will be doing live demonstrations. This rib which has been built by Al Suwaidi Marine and is fitted with the latest

technology for autonomous vessel control from local UAE Company MAPTECH. The heart of the USV system is the MAPPRO box which controls the vessel and allows for full integration of all onboard and auxiliary systems such as engine control, radar, night vision camera's, sonar, etc. The boat can be controlled by 4G, Radio Frequency or through satellite from anywhere in the world. Exalto Emirates as the GCC distributor of [MAPTECH](#) is proud to be part of this cutting-edge technology.

In addition to the above Exalto Emirates will also showcase the OXE high-performance diesel outboard, HamiltonJet Waterjets, Seahawk anti-fouling, 3M marine products, and Lumishore Underwater lighting. Lumishore builds the brightest, most beautiful, high-performance underwater LED lighting solutions for the marine sector using proprietary LED technology. Every Lumishore LED light is the result of an uncompromising approach to design, development, manufacture and a continuous search for [cutting-edge lighting](#) effects onboard Super and Megayachts as well as smaller pleasure boats.

The boat show promises to be the marine event of the season for Abu Dhabi.

Exalto Emirates Bio:

[Exalto Emirates LLC](#) was founded in 1995 and is a wholesaler of marine equipment. The company represents over 80 reputed international manufacturers of high-quality marine components supplying to pleasure and commercial boat builders, shipyards, service providers, fleet owners and to the retail market thru a network of dealers.

Operating from the head office in Sharjah and branch office in Dubai the company supplies within the UAE, other GCC countries and across the greater Middle East, Africa and the Indian subcontinent.

With a very large well-stocked warehouse the company is able to satisfy most customer needs from stock. In support of the products, the company operates a service center from Dubai Maritime City providing installation assistance, commissioning, servicing and warranty support.
