

## Kids learn to code in Learn2Code's live online classes from comfort of home

Students of top tier universities teach coding to kids in engaging video conference based classes

The logo for Learn2Code features the words "LEARN", "2", and "CODE" in a bold, yellow, pixelated font. The number "2" is enclosed within a yellow circular border that has a pixelated, dashed appearance. The entire logo is set against a solid black rectangular background.

**Houston, Nov 2, 2018 ([Issuewire.com](http://www.Issuewire.com))** - Ednora's Learn2Code program enables wide reach of high-quality computer science education for kids through its live online coding classes. The program taps into students of top tier universities to teach computer programming to kids in engaging video conference based classes. Learn2Code provides affordable classes with flexible schedules that are easily accessible from the comfort of home.

While the demand for computer science graduates is burgeoning, exposure to computer science among K-12 students is yet to catch up. Studies show that early exposure to computer science education builds computational thinking that boosts the confidence of children to pursue computer science in higher grades or in college. Engagement and motivation form an essential part of the education to build long-term interest and success. Learn2Code's mission is to make this happen.

"Learn2Code classes are entirely project based which makes it fun for kids. The students pick projects based on their interest areas (games, science, etc) and learn coding concepts as they write code to develop these projects. Our small class size ensures the required individualized attention to each and every student to achieve course objectives. Not to mention that our instructors also act as mentors who motivate kids!" said Smita Shrivastava, Founder, Ednora.
