Boca Raton, Nov 27, 2018 (Issuewire.com) - Contact Mobile Tint Dr., today by calling 561-264-8661 to learn more about the marine tinting services that we offer. We would be happy to arrange an absolutely free, no obligation consultation and estimate on implementing window film on your boat.

RESIDENTIAL TINTING:

Residential Window Tint is a great way to control the sun that comes into your home. The sun can make certain rooms in your home unbearable during the day, so by applying window film to these rooms, you help to better control this. Residential window film has many different added benefits.

Reduce the Heat Coming into your Home

Open your blinds, shades, or draperies and let the sunlight in. In addition to blocking heat, home window tint reduces glare by up to 87%, making it easier for you to watch television or work on a computer in the comfort of your home. Because window films are made with ultra-clear, distortion-free materials, you won't even know it's there.

Block up to 99% of the Sun's UV Rays

Most fabrics, furnishings, and artwork can fade simply by allowing daylight to pass through an untreated window. Home window tinting with window films will block up to 99.9% of all UVA and UVB rays, helping to protect your family and preserve the color of your furnishings, fabrics, and carpets.

Lower your Electricity Bill

According to the EPA Energy Star Buildings Manual in the United States, approximately half of a home's

utility bills are wasted by loss of heat and heat gain through untreated windows. Home window tinting can significantly improve energy efficiency. With a thin, virtually invisible addition to your home's existing windows, window films can help you save up to 50% on cooling costs.

Add Privacy and Safety to your Home

Glass can be a real hazard in the home when broken from accidents, storms, or break-ins. Safeguard your family and your property with safety films. This transparent but powerful barrier helps hold a glass in place should an impact occur, and helps you defend against the unexpected.

Extend the Life of your HVAC Unit

Because your HVAC will not need to work as hard to keep your home cool, the life of the unit could be extended through the use of window film.

COMMERCIAL TINTING:

Today's commercial office buildings, store-fronts and high-rises feature more glass than ever before. The problem is that while they are beautiful to look through and create stunning architectural designs, it comes with a cost. Windows are notorious energy wasters. While most newer buildings feature Low-E windows that are designed to help increase efficiency, they offer little or no solar protection. This means your business or office space will still suffer from the harmful effects of the sun such as fading, skin damage, heat build-up, and annoying glare. Mobile Tint Dr., offers commercial window film designed to eliminate hot spots, cut glare, reduce fading and save energy!

Commercial Window Film Benefits:

Protect Furnishings, Floors & Artwork from Fading with our 99.9% UVA & UVB UV Rejection Films. Protect against the harmful UV rays that cause skin cancer. Protect interiors from fading (addresses three major causes of fading: Solar Heat 25%, Visible Sunlight 25%, UV Rays 40%, Misc. 10%).

Energy Savings. Can pay for itself in as little as 6 months. Enhances the Appearance of your Building by Establishing a Uniform Appearance on the Outside making it more aesthetically pleasing.

Conserve Energy. Reduce A/C Bills up to 30-40 Percent & Lower Room Temperatures up to 15 Degrees.

Eliminate Hot/Cold Spots for Year-Round Comfort. Reduce cooling costs in the summer and keep your rooms comfortably warm and energy efficient in the winter. Save on Energy Costs Year-Round because

Window Films Helps Keep your Office Cooler in the Summer & Warmer in the Winter! Prevents your tenants from being uncomfortable from the rooms being too hot or cold & keeps them happy year-round & continue leasing from you.

Control Glare on TV & Computer Screens. Enjoy your views. Window Tint is cheaper and more efficient than window coverings & blinds, not to mention lasts longer. Our films allow you to preserve your view, unlike heavy lined draperies/ blinds which compromise your view. Spectrally Select Films: allow clear visibility from the outside looking in as well as the inside looking out with high amounts of heat rejection and UV/IR protection. Also, these films will prevent high lighting bills which can be caused by other films.

Gain Privacy. Improve Daytime/ Nighttime Privacy & Exterior Views. Gain privacy on the outside while still being able to see out, even at night! Our films allow you to allow or block the natural sunlight while

still gaining results.
