

Rapid Release Therapy team attends HCF conference in Lake Las Vegas.

Rapid Release Therapy team takes conference by storm with their innovative high-speed vibration therapy device and garners the attention of all attendees

Costa Mesa, Nov 21, 2018 ([Issuewire.com](http://www.Issuewire.com)) - In 2010, the Rapid Release Therapy was designed and patented by a practising Chiropractor. Dr Stanbridge of Orange County, CA. He developed the device as a way to focus on the most common areas of the body involved in aches and pains and to provide his patients with relief in a non-surgical, holistic approach. Today, Rapid Release Therapy PRO2 is poised to become the leading therapy for chiropractors, physical therapists, and sports trainers and the health and medical community in general.

The Rapid Release Therapy team went to Lake Las Vegas at the beginning of November to attend the HCF (Health Centers of the Future) conference and took the conference by storm. Throughout the weekend the team worked nonstop to deliver demos and information to attendees and became the most visited booth throughout the conference. HFC is a group of individuals dedicated to providing innovative healthcare to their patients and clients. Many of the attendees found Rapid Release Therapy to be a great asset to their practices. Throughout the weekend, the team was able to showcase how effectively the Rapid Release Therapy Pro 2 was able to assist chiropractors, massage therapists, physical therapists, and more in their practices. Rapid Release Therapy will be attending the Nashville, Tennessee seminar in March 2019.
