

Syndicate RFID launches 2 Small Sized On-metal UHF labels with big performance

Verna, Nov 28, 2018 (IssueWire.com) - So what's special about the new MOM 2916 & MOM 3520? The 29 x 16mm & 35 x 20mm label dimensions not only make tagging of objects with very limited application area possible but provide for a fantastic asset tracking solution without any compromises on reading range.

Typically, smaller sized tags compromise a lot on a reading range. These new On-11 metal UHF labels offer a staggering read range of up to 5 – 8 meters.

MOM 2916 and MOM 3520 are great for securing IT, Healthcare & Industrial assets. Their additional flexibility for curved surfaces makes it perfect for tracking a variety of objects.

We've also deployed the latest Ucode 8 chip from NXP which ensures fantastic performance. Compatible with leading UHF enabled thermal transfer printers, these labels also feature a high-performance permanent adhesive ensuring strong adhesion.

For more information on these products as well as our other offerings, please visit www.syndicatorfid.com
