

Channel drain- Drainage channels for Commercial and Industrial applications

Dallas, Dec 10, 2018 (Issuewire.com) - Ensure your drains stay free from blockages with this channel drainage. They act as perimeter drains, quickly removing water from hardscapes and directing it away from building structures. Suitable for Driveways, pathways, patios, conservatories, swimming pools, sports areas, gardens, and water features. A professionally designed channel drain system is visually appealing. The durability & high performance of the Duratrench [Channel Drain](#) ensures a long lasting, permanent solution for the removal of standing surface water. It is easily cleaned and maintained to ensure your channel drain achieves optimal performance. Duratrench channel drain is generally used in public or industrial spaces where point loadings are likely to be higher. Dura trench offers a wide range of standard, modular and custom-made drainage channels in stainless steel to meet any drainage requirement.
