

Randburg Glass: Meeting All Your Glazing Requirements

Johannesburg, Dec 12, 2018 ([Issuewire.com](https://www.issuewire.com)) - Randburg Glass started its journey in 1984 from Gauteng, South Africa and has over three decades of experience in the commercial and domestic glazing industry. The company offers both single and double glazing services, emergency glass replacements, installation and repairs of windows, mirrors and table tops. Their team of expert professionals also conducts installation of energy efficient glass.

[Randburg Glass](#) is a family-owned business company headed by the father-son duo Jimmy Robertson and Wyn Robertson. With over 75 years of professional experience, the glazing and window repair services of the team have increased significantly over the years.

Services offered by Randburg Glass

Single Glazing: The company is renowned for efficiently installing single glazed windows that are constructed with a single pane of glass. The thickness of a typical window glass usually falls short of providing adequate insulation. The single glazed glass, on the other hand, can add more insulation power to a window.

Double Glazing: Double glazed windows are usually advised by the professional team of Randburg Glass if the location of the building is in colder climates or when the inhabitants are dependent on air-conditioners and central climate control systems. The double glazed windows are separated by a vacuum that adds to the insulation factor. A double glazed window can increase thermal efficiency by 80%. The efficiency rate actually depends on the quality of the glass and the type of glaze used. Randburg Glass always relies on high-quality materials when performing any glazing work.

Apart from glazing services, the team of professionals at Randburg Glass can efficiently handle installation of energy efficient glass, mirrors and table tops. The company also conducts repair services in residential areas. Some of the better well-known clients of the company include Sun International, St. Peters Prep and College, the Crawford Schools Group, etc.

Safety and Security Measurements

Randburg Glass makes sure that all the work done by them is completed as per the international safety standards. The company strictly follows SABS 0137-2000/SABS 1263 Codes of Practice concerning the installation of laminated and toughened safety glass. This standard is regulated by the South African Glass Association. Safety is of utmost importance whether it is a school, a commercial setting or a residential space.
