Miami Lakes, Dec 14, 2018 (Issuewire.com) - Protecting your landline is a real necessity nowadays. According to the Federal Trade Commission's (www.ftc.gov) published stats, there has been a 650% increase in consumer complaints in the last 6 years. In 2016, 8.4 million complaints were filed by consumers. This means that at least six per cent (6%) of the households in the US or 1 in 20 households are victims of some scam every year in the United States alone. This is why it is important to protect your phone line (at home or business) with a call blocking device. The Ultimate Call blocker (UBlocker) is a new product/service that contains several unique features among the other call blockers in the market:

Dual Blacklists - The UBlocker features 2 blacklists; a global blacklist and a user blacklist. The global blacklist is fully automated (e.g. calls from these numbers are automatically blocked without having to answer calls or press any buttons), and actively managed by HQTelecom (currently with 162,000 blocked numbers worldwide). The user's Blacklist has an UNLIMITED capacity to block calls using phone numbers, names, or area codes via a user-friendly website. Another new feature is the

WHITELIST MODE – When turned ON, it blocks all calls except those in your WHITELIST. The Whitelist-Mode feature can offer users complete privacy.

"We receive several requests daily from homeowners (mostly the elderly) seeking for a way to stop the annoying phone calls they receive constantly," says Alfredo Purrinos, former NASA scientist and creator of the UBlocker. "Some complain about getting robbed by scam artists impersonating government agencies and/or relatives in distress", even though they registered their phone numbers with the government-sponsored "Do Not Call" list".

Illegal telemarketing operations and scam artists (which represent more than 90% of the calls people get) use automated dialling services (e.g.robocalls) to detect humans. These services use several phone numbers, including a common something referred as 'neighborhood spoofing' which consist in using the same area code and prefix of the numbers being called. This is why it's important to have fought back with an intelligent and capable call blocking system that helps reduce the number of these calls. The key difference among the UBlocker and other call blockers in the market is the ability to help consumers in a proactive way. With the UBlocker, there is little or no need for detective work since most of the unsolicited calls will be blocked BEFORE the users answer the calls.

The Ultimate Call Blocker is manufactured in the US by Hi Q Telecom Inc. (<https://www.hqtelecom.com/>), and can also be available in online stores such as Amazon, and soon in eBay, Walmart, and NewEgg. The UBlocker requires the caller id service to be active on the phone line in order to work properly. It also uses the Internet to check the global blacklist in real-time and block numbers automatically.

About the Company:

Hi Q Telecom Inc. (HQTelecom.com) is a BBB A+ rated corporation specializing in telephone security and speciality products. Our main office is located in Miami Lakes, Florida. For more information about incoming call blocker devices or the company visit [hqtelecom.com](https://www.hqtelecom.com) or contact us.
