

Be Software Releases Version 6.2.7 of IINSIGHT

Be Software Software is pleased to announce the release of version 6.2.7 of IINSIGHT. There are several new features in this latest release of Injury Management Software.

Add a Field	Field Properties	Form Properties
	Label	Medium text
	Big text	Yes / No
	Integer	Date
	Float	Currency

Sydney, Jan 24, 2019 (Issuewire.com) - Be Software Software is pleased to announce the release of version 6.2.7 of IINSIGHT. They have created an awesome brand-new 'Custom Forms' Feature for insight. The 'Custom Forms' Feature allows organizations to enforce the quality and the detail of information collected by their staff.

This includes Customized Questionnaires, Data Capture Forms and Client Specific Forms such as Doctor, Client, Employer forms etc.

This enables you to control the content collected and the validation of the content is very advanced.

The 'Custom Forms' are 'Smart' forms and change dynamically based on earlier responses to questions.

This is a really good tool and is an extremely smart online form feature, the 'Custom Forms' are very versatile and include the functionality described further below and more:

The Custom Forms are created in the Templates menu of insight and users with permissions to create/edit Templates will be able to create/edit Custom Form Templates also.

There are some very useful fields that can be used if desired including:

- Label (The Custom Form Name)
- Big Text • Medium Text
- Yes/No

- Date
- Integer
- Floats
- Currency
