

Portwell Recognized as Top 10 Imaging Solution Providers in 2018 by MED-TECH OUTLOOK Magazine

Fremont, Jan 23, 2019 ([IssueWire.com](http://www.IssueWire.com)) - MED-TECH Outlook magazine recently recognized Portwell as one of its Top 10 Medical Imaging Solution providers in 2018. “This is an annual listing of 10 companies that are at the forefront of providing an advanced imaging solution to facilitate precise diagnosis and transforming businesses,” explains Allen Lee, president and CEO of American Portwell Technology, “and we are proud to be listed among these prestigious companies.” American Portwell Technology, Inc., (<http://www.portwell.com>), is the US subsidiary of Portwell, Inc. a world-leading innovator for Industrial PC (IPC) and embedded computing solutions, and an associate member of the Intel® Internet of Things (IoT) Solutions Alliance.

Three Outstanding Reasons for Making the Top 10

Jack Lam, American Portwell’s product marketing director for the medical market, believes that, among the many reasons Portwell earned its place among the Top 10, three stand out: medical grade quality, professional and speedy engineering service and long life cycle support. “There is no substitute for quality,” says Lam, “and Portwell’s quality management system, such as ISO 13485, is able to minimize risks and ensure medical grade quality for customers in the highly specialized medical market and its applications. Portwell has fortified its foothold in the medical landscape by providing fast and expert computing technology and engineering services to empower medical imaging equipment.”

According to Lam, another equally important factor in making the Top 10 is the company’s flexibility to make customizable products. Lam believes that the focus on “made for a customer” solutions has helped Portwell create long-lasting relationships with its clients. “One aspect of our customizable solutions is our customer-oriented mindset,” Lam explains. “This customer-oriented mindset enables us to provide our clients with a timely response to their requests as well as ensuring we always consider how our solutions can best benefit those customers. In addition,” Lam adds, “when designing our wide range of embedded computing platforms for medical applications, we keep one eye on providing the latest technology and the other on meeting the industry’s demands for longevity. So, our customers not only benefit from the most up-to-date technology and features, but they also gain peace of mind from the long life cycle support (15 years) inherent with every Portwell product.”
