

## Tier3D Artificial Intelligence Phone & Gadgets Are Now Available For Crowdfunding

Tier3D has launched an Indiegogo campaign with AI-powered gadgets, which enable highly personalized human-like machine intelligence. Tier3D AI works like an intuitive extension of yourself, seamlessly helping you with the things you do.

**Silicon Valley, Jan 2, 2019 ([IssueWire.com](https://www.issuewire.com))** - Tier3D, a Silicon Valley company has launched an Indiegogo campaign with AI-powered gadgets, which enable highly personalized human-like machine intelligence. The campaign is available at <https://igg.me/at/tier3d>. Tier3D AI works like an intuitive extension of yourself, seamlessly helping you with the things you do. It can organize documents, do a deep search in the data, summarize content, create presentations, make suggestions etc. The team has experienced Silicon Valley professionals along with a Nobel Laureate and a Stanford Faculty as advisors.

**Shalender Singh**, CEO/CTO of Tier3D announced that “The Tier3D devices available on our crowdsourcing campaign are highly specialized for Artificial Intelligence. It is the first product to create a complete hardware and software ecosystem for crowdsourcing AI. Tier3D hardware consists of a specially designed smartphone, a smartwatch and mixed reality glasses. This hardware connects to the Tier3D Artificial Intelligence cloud and contributes to human-like artificial intelligence. Tier3D crowdsources Artificial Intelligence to generate a deep understanding of what you need and helps as an intuitive extension of yourself.

Let me explain it with an example. Let us say you wear the Tier3D watch and go to a client meeting. Your Tier3D watch will passively understand your surroundings, the context and the content of your conversation by using novel 3D Light Field Sensor, acoustic sensor and other sensors. Let's say your

client wants you to send a presentation. Tier3D will start working on it in the background. When you reach home a well formatted presentation will already be waiting for you.”

**Srini Srinivasan**, CMO of Tier3D, elaborated that “Tier3D is committed to providing instant value for our products. Imagine having a smart, intuitive assistant by your side at all times, like in sales meetings with prospects, ensuring that tailored content is instantly crafted & presented so you can target specific opportunities. Our solution frees you up to focus on building personal relationships with clients by leveraging the power of our AI-driven devices to do much of the grunt work of building content without making it seem templated.”

Tier3DPhone & Tier3DWatch have special 3D and lightfield sensors, which can do a detailed and rich capture of your surroundings. These devices have unique design elements, which enable crowdsourcing of AI. The **Tier3DPhone** has a rotatable sensor panel, which can capture the world at the best possible angle. The Tier3DPhone is dockable over the **Tier3DWatch**, which allows hands free operation of the phone. The **Tier3DGlass** has a sleek & sturdy pocket carryable design letting you take your Mixed Reality experience anywhere.

**Vishnupriya Singh**, the COO of Tier3D affirmed that “We have ensured that Tier3D designs, although novel, are also very realizable. Indeed, the integrated solution is unique, yet every single part of it is easily buildable. The software architecture has been componentized and the overall design has been tested for scalability, and the hardware components are readily sourceable from our established supplier base that we have cultivated over the years. We are confident we can deliver what we promise.”
