

CoreIMS helps to manage conveyor operations

New Core Pick and Pass Module

Frederick, Feb 22, 2019 (Issuewire.com) - New Core Pick and Pass module allow to integrate with your conveyor software (Kepware) and manage your conveyors' operations. It could be implemented with CoreIMS or as a standalone application. We support basically all algorithm for LPNs (OBLPN, Cases) diverting which can be easily setup based on your specific processes. We can help to make your processes of receiving and shipping faster, more accurate and transparent. All transactions are logged in to history table and available for future review and analysis.

About CoreIMS™. The CoreIMS Inventory Management System (CoreIMS™) is a cost-effective inventory management system that provides flexibility in supporting warehouse operations. CoreIMS™ is designed to address a comprehensive set of warehouse needs, efficiently and effectively, including the management of multiple warehouses.
