Electric Scooters Soon to be Legalized in Ireland

As one of Ireland's leading electric scooter suppliers they are part of a big push in government to legalize electric scooters on Ireland's roads

Dublin, Feb 20, 2019 (Issuewire.com**)** - Escooterstore claims that people can cut their carbon footprint by 30% by switching to electric scooters from cars and other modes of transport that cause pollution. According to their sources, it is also a great short term strategy to reduce traffic congestion on Ireland's roads.

"By legalizing electric scooters on our roads we have a short term solution to the traffic congestion in our towns and cities. For the price of a cheap bike, people can now get an electric scooter which they can use to commute to work each day all whilst taking traffic off of the road network and reducing their carbon footprint." - Noted Escooterstore's CEO.

Electric scooters are the short term solution to reducing your carbon footprint all whilst saving money on transport costs. As well as this they are a fun way to commute to work and a great stress reliever. Their scooters are CE and UL certified so the batteries are 100% safe.

Etech is Ireland's only trusted store for E-scooters and has scored a mark in the industry. Their quality products are sourced from the world's best manufacturers.

About Escooterstore:

With over 2 years in the business, Escooterstore have become Ireland's main provider of electric scooters. They have a range of premium brands such as Xiaomi and Gotrax.
