SapphireOne Firewalls Vendor Bank Account Changes

Sydney, Feb 6, 2019 (Issuewire.com**)** - SapphireOne is a leader in ERP, CRM, DMS and Business Accounting Software who increased firewalls and security on Vendor bank accounts. SapphireOne prides itself on the security of its datafiles and programmed a Workflow which highlights any changes to Vendor bank account details.

The SapphireOne Workflow ensures every time there is a change to bank account details, it needs to be approved by the company's nominated person. They simply go into the History of Bank Changes screen

and review the changes to either approve or reject. As an extra precaution, SapphireOne has informed all clients to verbally confirm changes with their appropriate contact.

This security threat with vendor details highlights the issues being raised regarding cybersecurity and cloudbased storage. ERP applications store all the critical information of companies like their finances, employee information, trade secrets, CRM marketing, clients list and more, so it is imperative companies remain vigilant and ensure they are up-to-date with the latest software versions. SapphireOne has remained on-premise and twice a week provides their clients with version updates. They have an inbuilt HTML webserver in their client/server application which allows every user access to certain parts of the live data from any device with a browser. "Our HTML web server in a Client/Server application providing a Web Pack solution was in the Top 10 innovations in ERP" mentioned John Adams, CEO, SapphireOne.

Company Profile:

Sapphire was launched into the Australian market in 1986 as the first ERP application to work on both Mac and Windows platforms simultaneously. The SapphireOne product delivers a platform independent all-in-one ERP, CRM, DMS, Business Accounting Application solution within the one datafile. One of our strongest selling points is all modules and any add-ons are included and offered to our clients. Being all-inclusive, access is provided to every module via a single toolbar which includes Accounts, Inventory, Job Projects, Asset Management, Payroll/HR, Management, Utilities, and Workbook. SapphireOne prides itself on continuous innovation with a strong emphasis on research and development and working organically with their clients
