

# Tech-Enabled Concept to Completion Solution

## Easy Home

**Bengaluru, Mar 17, 2019 ([IssueWire.com](http://IssueWire.com))** - Easy Home is a Turnkey Design and Build Service providing turnkey solutions for architecture, construction, interior, and all other residential needs, all through their Technology platform 'E-Home', thus ensuring complete transparency and accountability.

Easy Home was started with the belief that owning a home must be a joyous experience for homeowners. Standing with a firm belief that great design can only be executed when the Home Architect is at the core of the journey from concept to completion. To enable this, a team of in-house [architects](#) as well as renowned design partners from across the globe collaborate to effectively conceptualize, manage, and deliver your dream home using the technology platform.

Providers of end-to-end home planning, designing, building and project management tools to the homeowner with the power to be connected to the work on site completely mobile. Easy Home is a design and technology-first startup and employs a combination of data science, algorithms, and design to create unique experiences for homeowners. With over 50+ happy customers and trusted design partners across India, [Easy Home](#) is India's first service to give the homeowner complete integrated services with absolute transparent systems.

Founded in 2017 by two young enthusiasts; Mr. Raja Arjun and Mr. Karthik Raju. Raja Arjun is a fourth generation entrepreneur with over a decade in the reality, design and build sector, delivering projects worth a cumulative value of over Rs.6,000 crores (Apx.1 Billion \$) for his clients. Karthik Raju is an entrepreneur and an MBA from Babson College, Boston, USA. His experience in Technology Consulting and Real Estate has enabled him to bring a fresh perspective in the development of the technology platform that enables to execute tasteful designs for the clients.

Improved project outcomes can only occur through understanding the most significant of the problems in the construction space which are the lack of Transparency, Communication, and Collaboration.

To make this possible Easy Home provides end-to-end home planning, designing, building and project management tools to the homeowner with the power to be connected to their work on site completely mobile. They have put together their in-house [Architects](#) and renowned design partners from across the globe to effectively conceptualize, manage, and deliver dream homes using their technology platform 'E-Home' which uses a combination of data science, algorithms, and design to create unique experiences for homeowners.

'E-Home' is the first of its kind that enables homeowners to communicate, collaborate and track their projects from concept to completion. They are constantly evolving as they strive to bring more power into the hands of the homeowner which is a theme underlying all of the above technologies in the impending connection of many construction activities that are currently siloed.
