

Shufti Pro launches Auto Code Generator for Quicker Digital Fraud Prevention

London, Apr 29, 2019 ([Issuewire.com](https://www.issuewire.com)) - Shufti Pro has launched a new feature by the name of Auto Code Generator. This API based code will allow Shufti Pro customers to integrate its services in just 5 minutes with any pre-existing online portal, website or mobile application. All major programming languages are supported in this feature.

Shufti Pro, an AI-powered identity verification SaaS product, has launched an “Auto Code Generator” to make the integration process entirely hassle-free for its customers. Because of this new feature, Shufti Pro clients can now integrate any of Shufti Pro verification services with their website, mobile application or service portal in less than 5 minutes.

Shufti Pro is already offering complex identity verification services such as face verification, ID Verification, [address verification](#), and handwritten note verification within an industry-best turnaround time of 30-60 seconds. Now with this new feature of “Auto Code Generator,” Shufti Pro is aiming to raise the bar even higher in identity and user verification industry.

“Auto Code Generator” will support API-based communication between Shufti Pro’s verification system and any digital channel of its customer. Whether it is a remote account opening system of a banking organization, age verification portal for a gaming platform or checkout system for an E-commerce website, Shufti Pro’s RestFul API can now easily be integrated regardless of the verification service, format or technology opted by its customers.

How does it work?

The “Auto Code Generator” asks Shufti Pro clients to select the services they want to integrate with their pre-existing solution. Afterwards, they are asked whether they want to perform an onsite verification or an offsite verification - determining the source of verification data. Shufti Pro customers are also asked whether they want their customers to manually enter the verification data or should it be extracted directly by the OCR feature of Shufti Pro.

As this process is completed, Shufti Pro customer is shown the code that needs to be integrated into their digital channel to transfer the verification data to Shufti Pro and receive preceding verification status of their end-user. Shufti Pro displays the code in all major programming languages that include:

- HTTP
- Javascript
- PHP
- Python

So, for any technical resource in charge of the integration process, it will take no more than 5 minutes to integrate the verification services from Shufti Pro. Even if a client lacks the technical expertise or does not want to hire an outsourced technical person for integration, Shufti Pro also offers a Hosted Verification Page (HVP) solution where Shufti Pro performs the entire integration on behalf of their customers.

With a focus to create an online marketplace free of digital frauds, Shufti Pro has been upgrading its services & features ever since its inception. This is the reason why Shufti Pro services are now available in 230+ countries of the country and it can verify the identity of any one of the 7 billion people living in the world with not only their ID cards but passports and driving licenses as well. This is the reason why Shufti Pro supports 150 languages of the world and even offers 15 days free trial of its services.

Another attractive feature of Shufti Pro is its competitive pricing. The world-renowned verification service does not require its customers to sign up for any minimum number of verifications or monthly verification volume. Shufti Pro Back Office provides proof of each verification with rich analytics features and even free of cost Geolocation data for each verification.

“In a short span of time, Shufti Pro has been able to offer its verification services to hundreds of customers belonging to almost every part of the world and every industry that the human mind can think of,” said Victor Fredung, CEO of Shufti Pro. He further added that *“There are various other features and services that we are currently working on and will be launching in the coming months as we believe that an identity verification service - such as Shufti Pro - has to constantly innovate and adapt to stay one step ahead of online scammers and fraudsters”*
