

Tissue Banking Market to Surpass US\$ 2.5 billion by 2026

Seattle, May 10, 2019 ([Issuewire.com](https://www.issuewire.com)) - The Global [Tissue Banking Market](#), by Product (Media and Consumables, and Equipment), by Tissue (Bone, Brain & Spinal Cord, Cornea, Heart Valves, Skin, and Others), and by Region (North America, Latin America, Europe, Asia Pacific, Middle East, and Africa) was valued at US\$ 1.04 billion in 2017, and is projected to exhibit a CAGR of 10.8% during the forecast period (2018 - 2026), as highlighted in a new report published by Coherent Market Insights.

Transplantation is a complex area of medicine where organs or tissues are transplanted from one person to another. Human cells and tissue transplantation can save lives and/or restore essential functions. For instance, a corneal graft can restore sight in corneal blindness, and transplantation of a human heart valve can save lives even of pediatric patients.

Government plays an important role in tissue banking establishments and management. In 2013, three institutes at the National Institute of Health, including the National Institute of Mental Health (NIMH), the National Institute of Neurological Disorders and Stroke (NINDS), and the National Institute of Child Health and Human Development (NICHD) launched a joint initiative called as 'NeuroBioBank' in the U.S. It links together six large organ and tissue repositories through a common web portal.

Companies in tissue banking market are proactively working towards the research and development of new opportunities. In October 2018, MTF Biologics announced the formation of a new tissue recovery relationship with Regenerative Biologics, Inc. The organizations will seek to provide expanded birth-tissue donation opportunities for expectant mothers and their families and enhance patients' access to high-quality placental tissues for wound care applications.

In 2017, Natera, a leader in genetic testing, launched Evercord, a new offering that enables expectant

parents to collect, store, and potentially retrieve their newborn's cord, blood, and tissue for therapeutic use in transplantation and regenerative medicine applications.
