

Hwabundeul Self Watering by Our Patented Wick Rod Sub-Irrigation System in Korea

Hwabundeul

Seoul, Jun 17, 2019 (Issuewire.com) - Potsun.com has grown into a leader in domestic automatic watering pots since it registered a patent in 2012 by focusing on plant water management and developing automatic watering technology of bottom watering using the automatic watering rod in 2010. The watering system of a flowerpot dot com is not a method of giving water from the top to the bottom, but it is filled with water in a way that water is supplied for two weeks and water and soil nutrients are supplied by reverse osmosis It is a way to feed plants through rods. In 2017, we will introduce new features of the automatic watering pot through the Everglades brand.

In order to protect the plants from the drought, Hwabundeul.com Inc. studied the solutions to provide

optimum watering to plants automatically and developed the technology, sub-irrigation self-watering by wick rod in 2010, and the technology was patented in 2012. Hwabundeul.com's sub-irrigation self-watering application followed the way how plants feed water from nature, watering from down to top. Simply fill the water to the water reservoir at the bottom of the pot, and plant feeds water by itself. It provides easy and convenient watering to people, and continuous optimum watering to planting as well. Experience easy plant growing and enjoy nature with our Self-watering planters.

SELF-WATERING BY OUR PATENTED WICK ROD SUB-IRRIGATION SYSTEM

Wick bar stature is flexible as per the sort of plants for simple water assimilation by the plant.

Wick bar is reusable the same number of times as it is exhausted. [Container Vegetable Gardening](#)
