

“Mental Health cannot just be Crisis Management...No wonder things keep getting worse.”

Where students can comfortably initiate conversations with school therapists, counselors and psychologists and where schools can start helping students, that need to be heard, before its too late!

Fullerton, Jun 13, 2019 (IssueWire.com) - “Depression, Isolation, Bullying, Anxiety, Suicides, and School Shootings are much too insidious not to do everything possible to reduce and prevent” said the 17-year-old high school junior and the co-founder of FeelU™, Amaan Jiwani. “Most professionals and experts agree, early intervention saves lives and with FeelU™, students will have a comfortable, easy to use and tool right in their hands, said Jiwani.

From Elementary school-age kids to college age adolescents, in this highly public and social media, viral video world, young people are very concerned about how they look and are perceived by their peers in and outside of school. The apprehension towards visiting a school psychologist's office, with the fear of public ridicule, is preventing opportunities for early intervention in many of the most prevalent mental health challenges faced by students today.

FeelU™ is an extremely simple to use mobile and web messaging app that will allow students to communicate with their school selected psychologists and counselors with anonymity and privacy. Schools of any type and size can be linked to the FeelU™ app, where the schools will add the appropriate psychologists and counselors to receive message and alerts as the student initiate conversations. Interested schools, please visit www.feelu.org or email us at partner@feelu.org. Potential advisors and partners are welcome to contact us.

FeelU™ Be Heard...Anonymously!
