Collingwood, Jun 17, 2019 (Issuewire.com) - The Technical Traders Ltd has announced the release of their revised intuitive Trading Application for all current members. This new trading application represents an increased ability to better serve our client and members as well as improved levels of service, information, and automation. The Technical Traders Ltd plans to continue expanding this application to include proprietary trading models, alert services, market updates, and much more in the future.

The newly released Trading Application is a revision to the Phase-1 development process started in

January 2019. Phase-1 of this platform provides a live updating portfolio, charting, and instant SMS and email trader alerts for Buy Triggers, Price Targets, and Stop Loss. These automated features allow all of our members to visit the application to review and monitor all portfolio updates while the application runs the automation/trades on live data.

Future updates to this application, Phase-2, will include a new index trading system and signals, spike alert trades, gap window trades, chatroom, and more. The Technical Traders Ltd expects to release the second phase of this application before November 2019

"Once this new application is fully released in the next couple months this trading newsletter and its tools will make it one the best trading tools available for active traders no matter if you are a day trader, swing trader, or long term investor, you can trade and follow the markets with ease", said Chris Vermeulen. He also stated, "This is his life's work all coming together to create a traders dashboard that he has always dreamed of".

Brad Matheny stated, "My objective is to continue to deliver the best research and tools we can make available to our members. This trading application is a remarkable leap forward for The Technical Traders Ltd. It allows us to focus on our research, tools, and development of incredible new utilities and proprietary solutions for its users vs. attempting to manually manage the same data the application can handle in an automated process". He added, "The potential for what we can create as real value, proprietary insight and profitable opportunities for our members is limitless at this point – all it takes is for us to continue what we have been doing for years with our new focus of delivering these value solutions through our specialized trading application dashboard".

The Technical Traders Ltd expects to continue releasing a series up updates and improvement, with the inclusion of new trading systems, services, and alerts, over the next 6+ months before attempting to move the application into Phase-3 development which will be another game-changer for traders, and investors around the world.
