

Aquatrol announces new product and development

Elburn, Jul 29, 2019 ([IssueWire.com](http://www.IssueWire.com)) - Aquatrol, Inc a US-based manufacturer of ASME / NB, and PED / CE approved the safety and relief valves are pleased to announce new additions to our family of products.

Aquatrol's Series 740 valve line *NOW* offers cryogenic options, increase set pressures, flanged/sanitary connections as well as expanded inlet x outlet sizes. The 740 Series is a universal styled product, approved for all services (air/gas - steam and liquid) and available stainless steel, carbon steel or brass/bronze. Suitable for all areas of pressure relief and many process applications where a relief valve is required.

The *NEW* 140 Series valve line is now ASME approved for air and inert gases with pressure settings to 450 PSI. While compact in nature it's designed for rugged applications with excellent seating / reseating allowing for minimal loss of medium.

The Aquatrol website has been recently updated to include the newer options as well as more 'in-depth' technical information for all valve lines. Now available to 'pick' engineering cut sheets as well as 3D CAD files. With this, we have also expanded flow charts and sizing information to include international metric standards.

Please contact Aquatrol at 630-365-5400 or by email at sales@aquatrol.com
