

bodHOST Ltd. announces bodHOST 2.0 with fresh Brand Identity & new Datacenter Locations.

Edison, Jul 3, 2019 ([IssueWire.com](http://www.IssueWire.com)) - bodHOST Ltd. web hosting company headquartered in New Jersey has refreshed its brand identity and added more datacenter locations to its portfolio with bodHOST 2.0. With this initiative, the company has completely revamped its official website while also offering a choice of datacenter locations to clients across the US, Canada, UK and India with a view to targeting a global customer base. Since its inception in the year 2003, the company has been well known for catering to web hosting requirements of professional and individual users alike. The entire range of managed web hosting services offered by the company also gets a revamp in the form of revised packages at prices which according to the company are the best value for money.

Piyush Somani, CEO of bodHOST talks about [bodHOST 2.0](#):

"With changing times, there was a need for change, not just a subtle one but a substantial one to overhaul our brand, our approach, our infrastructure as well as our services. The decision to substantially change allowed us to start afresh and build a totally new website, make our services comprehensive as well as add new datacenter locations to increase our global presence. With bodHOST 2.0, our prime focus is to offer comprehensive managed hosting services and let our customers work more on their core competencies."

With an emphasis on enhancing overall customer experience, the company has built a team of experienced system administrators to offer 24x7 Managed Hosting Support as well as refreshed the backend infrastructure by bringing in Solid State Drives (SSDs) for storage and databases set up in a redundant RAID 10 configuration for optimal speed and data security.

To celebrate the company's 16th Anniversary and the launch of bodHOST 2.0, the company has also lined up some exclusive promotional offers for its existing as well as new customers right from cPanel Hosting all the way up to Managed Dedicated Servers!
