

Hinfoways Announces the Launch of a Global Healthcare Platform for Patients Searching for Surgeons

The patient-centric system seeks to break down boundaries by giving people an easier way to seek care from surgeons across the globe

The logo for Hinfoways features a stylized 'H' icon composed of two overlapping, curved, metallic-looking shapes. To the right of the icon, the word 'Hinfoways' is written in a bold, white, sans-serif font.

Global platform to find surgeons

Bengaluru, Aug 20, 2019 (IssueWire.com) - Hinfoways Healthcare Pvt. Ltd., an India-based healthcare company, has announced the launch of Hinfoways, a global healthcare platform for patients to find surgeons. The platform capitalizes on the growing availability of the internet and smartphones worldwide and increasing trends among patients to use such means to find surgeons and other

healthcare providers.

Millions of surgical procedures are performed worldwide each year. For a patient, going under the knife is a big decision. Patients considering surgery have a host of questions. Finding and seeking opinions from multiple surgeons may help patients address many of their concerns. To find answers to their questions and to select a caregiver, patients randomly search online, visit many different websites, and repeatedly share their personal and medical information on these websites. This creates a long, cumbersome, repetitive, and unreliable process. These challenges compound further when patients are trying to find surgeons in another city or country.

Hinfoways has created an easier way for patients to find surgeons from different hospitals on a single platform, thus avoiding the headache of numerous online searches and dealing with hundreds of different websites. With Hinfoways, patients can find surgeons, upload and share their medical reports with multiple surgeons at once, receive medical opinions and other relevant information, make comparisons, and choose an option that meets their needs. Patients can do all of these on a single secured platform. After seeking opinions, patients can communicate with their care provider and get their concerns addressed even before they start making plans. This will help them in saving valuable time and financial resources while feeling better informed and confident in their choice of providers.

Today, Hinfoways enables patients and organizations from various African, Asian, Middle Eastern countries, and other locations to connect with surgeons from internationally accredited hospitals in popular healthcare destinations like India, Dubai, Egypt, and more.

“We are pleased to be able to deliver a healthcare solution to patients looking for quality surgical care across the globe,” said Suhas M V, co-founder of Hinfoways. “Hinfoways has plans to continually expand its network of providers, providing more options for patients in more locations worldwide. It is all part of our commitment to connecting patients and surgeons across the globe so that they are not limited by geographic boundaries. We believe that when there are no boundaries, patients win.”
