

Nveda Launches Collagen Supplement for Knee and Joint Health

Bengaluru, Aug 9, 2019 ([Issuewire.com](http://www.Issuewire.com)) - The human body consists of collagen as the primary structural protein. Deficiency, exerted activities, age, all collectively contributes to its gradual deficiency causing various health complications that can interfere with daily lifestyle routines. Digestible collagen supplements along with other natural components in supplement Nveda Joint Support have the right medical prescription to induce strengthened muscles, bones, skin, and ligaments for better prospects of productive well-being.

The functional and structural significance of collagen forms the structural unit of our body. Type 2 collagen is the building block consisting of about 50% of our cartilage protein. As a result, with time, activity, and age, there is natural disintegration that causes problems like inflammation and pain due to the lack of hyaluronic acid lubrication. The natural production of type 2 collagen decreases as one ages. Functionally speaking, Type 2 collagen is the main ingredient in maintaining the conditions of cartilage and joints.

Bellavita Healthcare Private Limited has structurally created a supplement by the name Nveda Joint Support with the ideal dosage of Type 2 collagen along with other digestible molecular compositions like glucosamine, MSM, calcium citrate, and, calcium ascorbate. Collagen is hydrolyzed into a smaller molecular weight for an easily digestible formula.

Joint and knee pain is not just an issue for the ageing population but it has been manifesting in today's community of physically stressed individuals. Nveda Joint Support helps in regenerating connective tissues in joints and muscles, thus retaining the organic mass of our bones. The medicinal significance

of Nveda Joint Support not only relieves pain but also acts as a regenerative component for future maintenance of the body. The periphery and anatomy of our body that utilizes adequate amounts of collagen help in improving skin and cardiac health, as a pain reliever, prevents bone loss, boosts muscle mass, and other ancillary benefits.

Collagen Type 2 is extracted from the natural source of chicken cartilage. Nveda Joint Support's secondary component glucosamine is obtained from marine fish, thus making it product non-vegetarian supplement. For someone who is allergic to these ingredients or has an aversion towards such products should avoid consumption. However, the importance of a supplement like this will help in the improvement and sustainability of the body for better living standards in the years to come. Buy directly from Amazon and Flipkart or visit their portal at <https://www.nveda.in/product/joint-support/> to know more about the significance and effectiveness of collagen supplements in our lives.
