

Skill development of children with Augmented Reality learning products

The 5D Flashcard stands best for learning the wildlife and aquatic life to the kids, which improve memory and reasoning power

Gurgaon, Aug 16, 2019 ([IssueWire.com](http://www.IssueWire.com)) - RedChimpz.com, a Gurgaon based startup, deals in the realm of Augmented and Virtual reality. The company offers technological advancements in education and gamification industry. In the latest scenario, the use of technology has grown multifold. Keeping this in mind, the crew design and develop distinct educational games for children. The startup has launched the 5D Flashcard, which is the newest product in the market. This 5D Flash card can be viewed through a device where children can explore the entire animal kingdom and bird sanctuary. Through this, kids will learn about creatures and their habitat with fun.

Toys and games are strong and impactful tools for learning. The best thing about these flashcards is that they enhance skills and cognitive ability in children. Augmented reality and Virtual reality is the next revolutionary change in education and how it is perceived. With this, children get focused and able to retain the content for long. Therefore, educational games are imperative for holistic development," said the director of RedChimpz.

These Flashcards are portable, handy, and accommodated in pockets. Children can use these with a device like iOS or Android mobile phones or tablet which are easily available at home. When these flashcards are viewed with the device, the whole animal kingdom comes to life. By sitting at home, kids can have an experience of jungle safari. Flashcards are available in four variants including Wildlife animals, Aquatic animals, Birds, and insects. These educational toys are very much acclaimed by the children.

The set up was established in the year 2017, having an office in Gurgaon. The team of RedChimpz incorporated with the pool of expert professionals in AR/VR designing and developing, parenting, psychologists, and educational technicians. Here, the goal is to offer an immersive experience, which is entertaining yet an educational one.
