Blockdegree.org Launches Blockchain-based Certificate issuance & Verification Platform.

A leading public chain XinFin.Network has started 'Storing diploma and degree certificates' on a blockchain-powered platform called Blockdegree.org,

Mumbai, Sep 3, 2019 (Issuewire.com**)** - A leading public chain XinFin. The network has started 'Storing diploma and degree certificates' on a blockchain-powered platform called Blockdegree.org, The initiative is a brainchild of the community members of XinFin Network. This platform provides free course material and charges small fees of 9.99USD to store the certificate on the blockchain network. A similar feature will be available for any education institute, government or university if they would need to issue degree, a certificate or diploma on a blockchain platform.

Fake education certificates/degrees are a huge problem worldwide. The distributed ledger technology will help in the prevention of counterfeiting of the documents. Each degree/document will have a unique digital footprint that is tamper-proof and secure, thanks to the adoption of Blockchain technology.

Blockdegree platform enables students to quickly and easily get a correct, tamper-proof version of their certificate. This can easily be shared with employers, schools, family, and friends. To ensure the

security of certificate, a pilot utilizes the same blockchain technology which powers the digital currency XDC.

Blockdegree Certificate issuance Platform has Features like:

- Verifying authenticity of degrees with just one click.
- Students may share the link to their LinkedIn and other social media profiles so that any interested party can verify the existence of their degree;
- Blockdegree has enabled a system in which you can select a document. Herein, you can check its authenticity and at the same time, download an authenticity certificate that includes not only a unique ID but also the date and time of issue and the registration block.

With this initiative, block degree continues to add value to its academic ecosystem. Using blockchain to certify degrees provides students and companies with an easy and secure authentication process.

Mr Ankit Patel from block degree explains that "We are inviting Education Institution and government to start using our app to issue Digital certificate using the distributed ledger technology."

Right now, we give free Training material for the study purpose, and if you like to available certification, then you have to pay 9.99US$ fees. Certification will be issued to only those score more than 60% marks. If you fail, then the student will have the option to reappeared for the exam.

A significant part of that fees goes as network utility fees. 20% of such costs, we are going to burn in XDC coin. More than 100+ certificate already issued on blockchain within a week of launch. Use the promo "code10" at blockdegree.org and receive a full scholarship to appear for the necessary blockchain certification exam."

"We avoid using Bitcoin or Ethereum network here; simply because storing the certificate on either requires a high amount of cost and is a much longer process too. On the other hand, XinFin blockchain is optimized for making faster transactions and almost no cost compared to other blockchain networks," he added.

About Blockdegree.org:

Powered by XinFin.Network, Blockchain-based Certificate issuance & Verification Platform for universities & Government. It also enables easy access to the distributed ledger technology to the institution. Blockdegree Platform also provides free training material and blockchain certification.
