

## Catenaut Now Offering Trimble Terrain Navigator Pro

**Ruston, Sep 10, 2019** ([IssueWire.com](http://IssueWire.com)) - Catenaut, a full-service technical management firm developed specifically to provide support and streamlined services for the forest products industry, continues to lead by now offering Trimble's Terrain Navigator Pro as part of their full suite of technology solutions.

Whether working solo or as a team, Terrain Navigator Pro (TNP) has you covered. With Terrain Navigator Pro you can create quality maps that facilitate better planning, and faster decision-making, for

a fraction of the cost of similar software. In addition, the iOS and Android compatible TNP Mobile App, lets you take your projects to the field where you can verify assets with boots on the ground, even in remote cellular locations. Even better, data collected using the TNP Mobile App is automatically synchronized back to your desktop when you return from the field. When used in tandem, Terrain Navigator Pro and the companion TNP Mobile App will provide a seamless, integrated mapping workflow for your organization.

"Forestry is a demanding but rewarding profession. The fulfillment of managing personal land, managing land for others, or providing services to landowners, is hard to beat. Terrain Navigator Pro is here to make that job easier, and more rewarding." Says Jon Lunsford, Registered Forester, and Partner in Catenaut LLC. "As professional Foresters, we use Terrain Navigator Pro to complement our work in the field nearly every day. TNP provides an easy-to-learn format for data collection and planning within small or large forestry operations. With the TNP Mobile App or a hand-held GPS device, you and your team can collect important information about the Forest and Land Resources you manage. This information can be seamlessly synchronized back to your office, processed, and exported for use in commercial GIS packages."

In addition to now offering Trimble products, Catenaut also provides mobile applications, web-based services like Forest Management Compliance, server-based products, satellite imagery, and more.
