Drivers Real Time Millage Warranty Tracking developed for Auto Service Centers

Los Angeles, Sep 12, 2019 (Issuewire.com**)** - A seasoned global entrepreneur, Wayne Merry has built and patented software that can gather ongoing millage of autos and forward it to auto dealers service departments. The service centers can then reach out to the owners and inform them of their pending miles and time remaining before their warranties would expire. Most owners do not track or recall the terms of their warranties and therefore might fall out of the coverage costing them hundreds or even thousands of dollars. The software then allows owners instantly to book appointments with their service center online with a confirmation. Service centers, therefore, find an additional business with no additional costs and get happier customers with higher service surveys. The app also helps consumers save money with any of their coupons as well within the same app.
