

## Escape The Loopholes And Avail The Best Information System Services

**Englewood, Sep 26, 2019 ([IssueWire.com](http://IssueWire.com))** - eXigent Information Solutions, LLC, a company that exclusively focuses on providing custom solutions to a plethora of information system issues of small to medium-sized companies. It is an evident fact that myriads of Gas gathering and processing facilities, end up burning a hole in your pockets each year due to cost accounting mistakes. If you are someone looking for a rescue, we've your back! We specialize to deliver customer-oriented services and have designed an automated system that imparts higher levels of accuracy and negates costly errors so that you can amp up your game in the market.

Our basic objective comprises; developing any system to procure workplace efficiencies, fostered profits, accuracy, and cost-saving in the processing and reporting of the data via automation of the data garnering, input, and report generation process.

We have sagaciously structured our business, and we have expertise in the development of applications and information systems using Microsoft Visual Studio and the Office Suite of Applications. Our dexterous professionals make this possible, and our out-of-the-box services have enabled us to carve a niche in the market.

**\* Seize our services to foster your ROI**

We provide our clientele with an array of services to boost their profits and negate human errors.

Outsourced gas processing plant settlement accounting services on a contract basis using the GPIS system. Our services include [Gas accounting](#) as well as complete settlement accounting, starting from a collection of wellhead measurement information via mailing the statements to producers. We consider “client is king” and therefore, offer them tailored services to ensure complete client satisfaction. These services can be encapsulated, such as transferring of accounting information in an electronic file that can be uploaded into the customer’s accounting system. We do not charge any service fee for this purpose, but its charges are covered under the setup fee, a monthly fee which is concentrated on the number of settlement points. We also take care of application development on a contract, an hourly basis from system analysis and design through programming, testing, and implementation. Our application development can range from automation of Microsoft Excel spreadsheets or Microsoft Access databases with the assistance of Visual Basic and using Microsoft Access or Microsoft SQL Server as a database.

*“ Prior to implementing GPIS, our plant settlement was done entirely in Excel workbooks. The use of GPIS has assisted in creating checklists and cutting our total time spent on plant settlement in half. The team at Exigent, aided us, to have a smooth GPIS implementation and support issues are handled very timely.”*

Also, our products include Gas Plant Information System (GPIS) and Gas Marketing System(GMS). GPIS, can be elucidated as a cloud-based system functioning on the Microsoft Azure backbone that automates the plant settlement and accounting functions for gas gathering and processing organizations. You can opt for a safer root and negating the chances to commit an error with the assistance of this system and the agility, speed, and security provided by the cloud. With the assistance of this system, you can get automated plant settlement and accounting, easy procurement of information about gas flows and the entire allocation and settlement process. You can also juxtapose, inlet meters and tailgate products, gross margin reports by producers, contract, meter or system. Don’t you think using this, you can put down, loads of mountains, and can focus on other business elements. You won’t need to manually chart volume and gas analysis information and no more accounting information on monthly producer settlement, thereby, eliminating manual workload and errors.

On the other hand, our GMS is accountable, for managing the gas marketing process. It is a comprehensive solution to all the day-to-day functions of gas control. In this case, functionality comprehends the ability to record producer nominations at the wellhead and estimate the net volume of gas to be delivered to the pipelines. The best part is that it can also, generate sales reports, based on flexible criteria including, various factors such as delivery point, kind of market, or type of price.

GMS is responsible for generating sales reports based on flexible criteria including, delivery point, market, or type of price. It also produces nomination reports based on flexible criteria including delivery point, upstream or downstream transportation contracts. It is programmed in a way that it can send email confirmations, nominations or other reports to contacts. So, it’s the perfect time to drop-down your worries. As it also stringently tracks monthly imbalances by the owner. It also aids to allocate monthly delivery point volumes to CDPs meters. In the end, it juxtaposes allocated monthly delivery point volumes by the owner to the owner's daily nomination.

We follow a seamless process to succour our clients. After you get in touch with us, we go to the core of your requirements, and then lay out a detailed plan, and act pragmatically. We also structure the plan in the best possible way, and our plan will aid us, to make us top on your reliability list. And after all this, we diligently execute our plan. Also, our White Paper can give you an overview of the upstream, [Midstream revenue](#) as well as downstream segments of the Oil & Gas industry. Our layered services provide several benefits to our clients.
