

## Skroller, the e-scooter backrest is in town!

Patented backrest for e-scooters that enhances stability and boosts comfort during the ride, drastically reducing the risk of accidents.

**Los Angeles, Sep 12, 2019 ([Issuewire.com](http://Issuewire.com))** - Like the saddle on a horse, the e-scooter needed something that enhanced the **rider's comfort, stability, and control**. Resigning ourselves to sore legs, back pain and the immediate loss of stability and control at the slightest road crack was definitely not 'smart mobility'. Both new and experienced riders were longing for a device that reduced body strain and enhances control avoiding clumsy back-seats.

Fortunately, this device has arrived! it's called [Skroller](#) and it's already available for purchase on [Kickstarter!!!](#)

[Skroller](#) connects your body to the pole of the scooter **enabling it as the center of balance**. That's right, you can now shift your weight to the sides while turning so that the riding feels smoother and safer, **feeling in control of each turn, even when hands-free!**

<https://www.youtube.com/watch?v=fe2WAabpWQ0>

Skroller works by means of a band with a comfy cushion that you can easily fasten around your waist. The internal mechanism is designed to retrieve the band automatically as you get closer to the pole, so

**you can confidently lean back**, relax and adjust it on-the-go by simply pressing the button on top of Skroller, as you no longer need both hands to keep balance.

This opens up a whole new world of possibilities only restrained by your fantasy. Common actions that seemed impossible and dangerous while riding without Skroller, like wearing an umbrella, signalling a turn or even juggling are now at will, in a comfortable and easy way.

To achieve the functionalities needed while guaranteeing the best performance and endurance, we have engineered Skroller using the latest materials in the market. Making it **incredibly resistant to any type of efforts or shocks**.

Last but not least, Skroller is fully customizable! You can choose the color of almost any part ( body, button, cushion...) check out our picks [here](#).

We are Skroller S.L., a Spanish start-up behind the creation of the ultimate backrest for e-scooters. **Already holding the worldwide patent**, we are now ready to share our invention with the rest of the world, starting with our Kickstarter campaign.

Regardless of how you commute, we encourage you to let us embrace you while riding the Skroller wave and back our project [here](#).

Because getting there can be just as great as being there!
