

## Essco SL brings Atmospheric Water Generators Technology to Lebanon.

" Pure Drinking Water From The Air"

**Beirut, Nov 5, 2019** ([Issuewire.com](http://Issuewire.com)) - Atmospheric Water Generators (AWG) are ecologically friendly, a new source of pure drinking water for industries, businesses and home users alike.

WaterMicronWorld International, the world's leading supplier of Atmospheric Water Generators Technology and Essco SL, the agreement shall be finalised within this week.

The two companies believe the partnership will introduce the next billion-dollar industry to Lebanon and other regions facing the world's most serious water shortage problems.

WaterMicronWorld International technology is expected to change the face of water generation worldwide. Customers for the plants in the Middle East will be national water authorities for whom the prospect of an effective, economical and sustainable water solution will be priceless.

"This is a breakthrough in the search for sustainable solutions to water shortage globally as a result of shrinking ice caps and lakes due to global warming and increasing demands," said Robert Rainman

"It has the capacity to generate water in any part of the world, irrespective of the climate from a business perspective, we believe we are at the forefront of the next billion-dollar industry."

The COO of WaterMicronWorld Robert Rainman said: "WMW water generation plants have major advantages over methods such as desalination or reverse osmosis which use existing water sources to clean water. They require a vast capital outlay and cause their own environmental problems. Dumping salt produced in desalination back into the sea affects the ecology of marine life.

WaterMicronWorld International technology brings an ecologically friendly and new source of pure drinking water to industry, businesses and home users alike.

We provide truly affordable, state-of-the-art technology that is easy to operate and maintain.

Our technology taps into a water source that does not place more demands on Mother Earth--Pure water from the air we breathe! "We expect Lebanon to be a lucrative market for us," said Robert

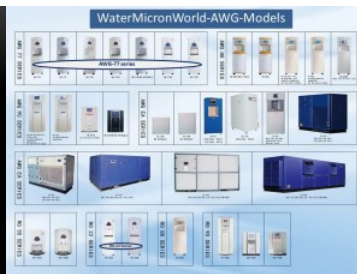

Rainman.

**“Every Drop Counts”**

WaterMicronWorld International is the leader in the manufacture, marketing and distribution of highly advanced atmospheric water generators that extract the moisture from the air and converts it into clean, pure drinking water. Water, essential for all aspects of life, is the world's most valuable commodity and is becoming increasingly scarce.

WaterMicronWorld International provides truly affordable, state-of-the-art technology that is easy to operate and maintain. The technology taps into a water source that does not place more demands on Mother Earth--Pure water from the air we breathe!
