

International Journal of Clinical Rheumatology

International Journal of Clinical Rheumatology

ISSN: 1758-4272

Abbeywood, Nov 12, 2019 ([IssueWire.com](http://www.IssueWire.com)) - International Journal of Clinical Rheumatology is committed to distribute most elevated quality studies identified with clinical determination and administration of rheumatic ailments through facilitated parts of clinical consideration and clinical examination concentrated on propelling treatment and personal satisfaction for individuals with joint pain, immune system infections, bone issue, and related conditions.

We feel contended to announce that our journal is successfully running in its Volume 14. We have successfully released special issues in our journal entitled Regenerative Medicine in Osteoarthritis and Epidemiology of Osteoporosis. Below are some most viewed articles in our journal.

- A novel treatment of knee degenerative disorders all-in-one intra-articular injection of platelet-rich plasma combined with hyaluronic acid
- High-field MRI exploration of the structural effects of cellular matrix™ on articular cartilage in knee osteoarthritis: A pilot study in 6 patients
- Long term follow up of an early oligoarthritis cohort shows that early aggressive intervention leads to drug-free remission after 10 years: results from the LOTO study

Our journal is going to enter volume 15 and we would like to invite all the researchers to take part in our journal.
