

Stainless Steel Fasteners Manufacturers in India

Stainless steel marine fasteners are corrosion resistant. The Sodium Chloride ample in the sea water is a catalyst of oxidation corrosion.

Mumbai, Dec 21, 2019 ([Issuewire.com](http://www.Issuewire.com)) - **Stainless steel marine fasteners** are corrosion resistant. The Sodium Chloride ample in the seawater is a catalyst for oxidation corrosion. **SS nut and bolt** make it less vulnerable to corrosion. The specific alloys that make up the marine fasteners resist this oxidation corrosion in the marine environments. There are a number of [stainless steel fasteners manufacturers in India](#).

Steel Tubes India produces high-quality stainless steel products. Different ranges of **SS nut and bolt** are available from us. We produce **austenitic bolts and nuts** that are used in corrosive applications. The non-magnetic bolts and nuts can be used in applications where the magnetism should not affect the application. There are also magnetic bolts and nuts after some cold works. The chromium and nickel addition give the products a fine polishing finish as well as the anticorrosive properties.

Stainless steel marine fasteners are corrosion resistant, and they last longer. Compared to some other materials used in the fasteners, the **SS nuts and bolts** will have more durability, stability, strength and long-lasting effect.

Fittings to docks, boats and marine equipment need stronger bolt and nut. **SS nut and bolt** will remain in shape without wearing off quickly unlike other material. Fasteners made up of other materials have been sold increasingly in the past. Though they were preferred in the short term as they were cheap, they create trouble in the long run. Thread failures are common in cheap material nut and bolts. When thread failures occur, they cause a direct threat to the adjoining parts of bolts and nuts. While attempting to remove or tightening a failed bolt or nut, they tend to break other parts of the equipment.

As **stainless steel nut and bolt** reduce the thread failure by far, they are good choices for long term usage. **Stainless steel parts** remain durable for longer periods of time. Even after years of usage, stainless steel bolts or nuts could be removed correctly without cracking or damaging the **marine fasteners**.

Stainless steel marine fasteners manufacturers in India have produced better nuts and bolts with higher quality. There are many such suppliers producing different types of nuts and bolts. Depending on the usage in deep-sea or in shallow waters, the designs and dimensions are available. There is a great number of choices available for the end-user.
