

Corefactors' Teleduce Strengthens User Experience With Newly Launched Updates

Bengaluru, Jan 16, 2020 (IssueWire.com) - [Corefactors](#) recently launched product updates for its integrated sales and marketing product Teleduce. Aimed at providing customers with superior user experience, these updates are a part of product updates launched every month. With Teleduce, sales users will now be able to eliminate invalid leads. This feature will boost the productivity of sales agents since they don't have to go through these invalid leads in the open leads list. Sales agents will also be able to enjoy push notification on the Teleduce app. This push notification reminds the sales teams of tasks and upcoming meetings. Helping sales representatives to stay on top of the things, push notification is an essential element if sales success.

The new Teleduce empowers the users with the ability to upload and maintain relevant API documents as well. Teleduce users will be able to attach invoices or documents for specific leads via API. Corefactors now take pride in being able to facilitate SMS marketing in targeted countries as well. Businesses in the UAE will be able to trigger and run SMS campaigns for local customers as well as customers in India and vice versa. With these product updates, Corefactors plans to smoothen the way users benefit from Teleduce.

Corefactors raised pre-series A funding last year with the help of ah!Ventures. As planned earlier, Corefactors now looks forward to expanding across the countries in APAC and MENA. With the aim of driving growth, Sharmila Sundaram, CEO, Corefactors believes that Teleduce will soon become the only sales and marketing automation product to help businesses sell faster across the globe.
