

Elekonika Electronics Launches a Comparative Analysis Between Elegoo Uno and Arduino Uno

New York City, Feb 13, 2020 ([IssueWire.com](https://www.issuewire.com)) - Parents can now quickly know which one is better, Elegoo or Arduino Uno, when it comes to picking the best for their child.

Elekonika Electronics has recently produced an enlightening article. They have compared the [Elegoo Uno and the Arduino Uno's starter electronics pack](#). These two starter packs are great for educating the children on electronics and programming. The article sums up on how versatile the Elegoo pack is for trying out various experiments. On the other hand, the Arduino kit is excellent for children to try on their own. Arduino focuses on the educational aspect more than the Elegoo kit.

"While analyzing these two starter [kits](#), our teams sought reviews from parents and children who were using these alike. Hence, the article is completely a genuine case study for those looking forward to buying a smart electronics kit for their children. We feel that for a child learning the real application of robotics, beyond the classroom, these two can be equally great with slight differences. You learn how it will help your child from this comparative review. Check it out before you proceed to shop one for your child," states Damon Coleman, the founder of Elekonika Electronics.

For parents, getting these starter kits for their children could only mean encouraging their children to learn physics and robotics with real-life applications. Both these products have an instruction manual for the parents and kids alike. Arduino even offers online support and systematic guidance on how to use it.

About the company: Elekonika Electronics is a New York-based firm tracking enabling technologies, providing engineering people with authentic news on pathbreaking innovations. They produce downloadable reports, webinars and articles focusing on the use of robotics and electronics in the real world.
