

“Atateken” Release of IT Asset Management Tool, VIZOR

The Beginning of a New Naming Convention for Product Releases, and a Fresh New Look

North Atlanta, Mar 3, 2020 ([IssueWire.com](https://www.issuewire.com)) - Vector Networks today announced updates to their IT Asset Management and Service Desk solution, VIZOR, under the Atateken Release. VIZOR releases are now named after streets in Montreal as a nod to the development team in the city.

Behind the product releases is the development team at Vector Networks. Considering the team is based in Montreal, VIZOR releases will now be named after streets in the city. Montreal renamed one of its streets to Atateken last year. *Atateken* is a Mohawk word meaning brotherhood, sisterhood, and equality.

The Atateken Release contains over 30 new features and updates to the ITAM solution. This includes a fresh new look. The color scheme is refined, and the new icons bring a more modern feel to the platform. “VIZOR has always delivered unique and powerful capabilities,” said Vector Networks CEO, Erick Yanez, “But it was time to refresh the interface.”

Among the new features, a variety of new reports were introduced in this release. The *Unauthorized Software Installations Report* identifies software applications that have been installed on a user’s device but haven’t been allocated to that user or device. As a result, IT Managers can easily identify where the software should be removed or if additional licenses should be purchased. Other new reports include

Software Expenses and Expirations, Software Allocations vs Installations, and Asset Changes.
