London, Mar 26, 2020 ([Issuewire.com](https://www.issuewire.com)) - Blueleaf Cyberspace, an award-winning company, has launched two online products. One is a Facial Registration Attendance System for Schools, Colleges and institutes who have been forced to look at digital learning as an alternative to physical presence due to COVID19. The other is their own Online Digital Learning Enterprise system for Schools, Colleges and

Institutions who do not have such systems. While many institutions already have online digital systems that work as an additional help to students, a majority of the smaller ones particularly schools do not have them. One of the first casualties of the lockdowns around the world is the schools, colleges and institutes. With no end in sight to COVID19, the students will have to study from home and institutions will have to seriously look at digital learning over the next 1 to 4 quarters.

The only option today is an online system that provides Digital information. An online digital system allows student access to information like notes, lectures, assignments and communicates with staff. Simultaneously, it allows staff to upload notes, assignments and information on required subjects. Simple? Not really because if you take into consideration that the system should handle multiple classrooms, multiple sections, multiple years, and the right information should go to the right people, you need a full-fledged enterprise system. The addition of Facial Registration for attendance is a major plus point which will ensure better compliance from students.

Blueleaf's system is also able to handle any number of students and staff from 100 to 10,000 and across multiple locations and multiple institutions. The company does not provide E-learning systems as yet, as the internet bandwidth needed for E-learning for 50 to 100 students per class will be challenging with millions working from home at the present time. Rather its focus is on getting Schools and institutions up and running in a digital world. According to Dr. Joseph Rasquinha, CEO "The system is totally online and is set up in a few hours. It is also extremely user friendly and can handle multiple levels of access among teaching staff to ensure that an institution's processes are not disrupted."

One of the advantages for schools and institutions of enabling a digital system is that it is not an additional expense, but an upgrade Post COVID19. The investment made by the school or institution is a plus point that will increase efficiencies and help students. Even the Facial Registration is a major plus point as it is another upgrade which can be continued post COVID19 in the school or institution and provide real-time information which can be accessed online.
