

Keep Calm and Bake On through this Crisis?

Enterprise cooks up creative solution for stuck-at-home students

Newquay, Apr 1, 2020 (Issuewire.com) - THEY SAY that necessity is the mother of invention.

As the Coronavirus pandemic sweeps across the world, a Cornwall-based company that champions innovation has developed a unique solution for our times: classroom cookery software that allows students to “cook” up recipes without leaving their homes.

Innovolo has today released their “gustum suavissitech” firmware specifically for schools looking to support remote learning in the aftermath of COVID-19, although it’s not hard to see the potential for this software in other applications soon. Available in three kit options, Beginner, Advanced, and Pro, all packages come complete with 24” SnT monitor, 3D food-grade printer, AI-enabled mixing bowls, virtual baking trays, and a holographic apron for the class teacher.

“There are a number of optional upgrades that schools can specify, such as the Virtual Shield, which is designed to protect the teacher from remote students trying to flick 3D-printed ingredients” claimed Innovolo Operations Director Bradley Pallister. “Whether you and your class want to produce a perfect Rhubarb Fool, or let your imaginations run wild with a custom recipe of your own (Self-Isolating Sundae, anyone?) – our remote baking software can handle it all.”

With thousands of students confined to their homes and pining for a creative outlet, it looks like we’d better brace for a storm of new recipes over the months ahead!
