General surgery is a surgical specialty that focuses on abdominal contents including the esophagus, stomach, small bowel, colon, liver, pancreas, gallbladder, appendix and bile ducts, and often the thyroid gland. A general surgeon performs a wide range of abdominal surgeries for many forms of intestinal and abdominal wall neoplasms, gallbladder disease, gastric and pancreatic disease. They follow the patient through critical care and surgical recovery all the way to outpatient care.

Renowned in the medical community for his commitment to his patients and his expertise when performing surgery using the latest technology and medical advancements, Dr. Mowschenson's research has been published in internationally respected, peer-reviewed medical journals. He also lectures on thyroid and parathyroid surgery.
