

UK Based Engineering Consultants Secure Expansion Into Australia With Two New Offices

One of the UK's leading civil and structural engineering consultancies, ELLUC Projects, is excited to be expanding its operation into the state of New South Wales, Australia.

London, Mar 6, 2020 ([Issuewire.com](https://www.issuewire.com)) - Global Expansion for UK Consultancy

ELLUC Projects have secured two new locations within New South Wales – one in Tweed Shire (which will act as the main hub) and another in Sydney (which will act as the central project office). Over the next five years, these two sites aim to create employment opportunities with 73 new jobs, which is welcome news in the currently challenging economic climate.

Deputy Premier and Minister for Regional NSW John Barilaro said “ELLUC Projects has delivered many successful projects in Australia including working on the Batemans Bay Bridge replacement project, so it gives me great pleasure to confirm it is regional NSW that this global leader will call home.

“ELLUC bring digital expertise to engineering projects, increasing capabilities and cutting construction costs and given this Government’s unprecedented infrastructure investment in across NSW, the timing of this could not be better.”

Elliot McLoughlin, Managing Director for ELLUC Projects Asia Pacific, comments, “These are really exciting times for ELLUC Projects and this expansion into the New South Wales region is a natural progression for us, as we have already successfully delivered many contracts within Australia.

Our UK team worked tirelessly to deliver such contracts, even with the time difference between Australia and the UK. They showed real dedication and commitment to the projects, which is also reflected in the work we carry out in the UK where we deliver innovative solutions for complex challenges.”

Global Network of Construction Expertise

With this expansion into Australia creates a global network of construction experts, working seamlessly over a 20hour working day, able to respond efficiently to client needs. Now, the team at ELLUC Projects brings together international projects, connecting expertise to deliver innovative solutions.

ELLUC Projects are a family run business – Elliot McLoughlin (left), Helen McLoughlin (centre), and Louis McLoughlin (right).

Ranked as the 256th Fastest Growing Company in Europe, ELLUC Projects demonstrates a clear vision and strong client relationships to create value engineering for construction projects. With offices based in Cheshire(company headquarters), Yorkshire and the Midlands, it is a family run business with the strength, depth and size of a multi-national.

Their professional team guides local authorities, developers, contractors, architects, off-shore investors, and landowners through every stage of the project specification process, incorporating unparalleled civil and structural engineering solutions for commercial and residential projects while continuing to push boundaries in digitalization of the construction sector through Building Information Modelling.

The civil and structural engineering specialists have worked on an extensive range of residential and commercial & infrastructure projects across the UK.

We are committed to investing in excess of over £13.3 million in the business operation, including creating new skills for the next generation of highly skilled engineers.”

The expansion of ELLUC Projects into New South Wales comes at a time where the UK’s construction industry, as well as the global construction industry, is facing a challenging period. However, experts have forecasted that 2020 will bring growth back to the sector with renewed investments in transport infrastructure, residential and commercial build projects.

ELLUC Projects are committed to helping clients in the UK, Australia and worldwide deliver future projects, unlocking opportunities and improving the lives of local populations through carefully managed construction projects.

Why choose ELLUC Projects as your Project Partner?

- Extensive experience and innovative project specification solutions for civil and structural engineering projects
- Our end-to-end tender process solutions guide local authorities, developers, contractors, off-shore investors and landowners through every stage
- A forward-thinking and real ‘can-do’ attitude instilled in our professional, specialist down-to-

earth team
