

Work management platform Kantree extends its free trial to 90 days to support remote teams during the outbreak

Kantree supports companies moving to remote work during the pandemic of COVID-19.

Paris, Apr 1, 2020 ([Issuewire.com](https://www.issuewire.com)) - The development team of Kantree by Digicoop has announced the extension of its 30-day free trial to 90 days, in an effort to support businesses moving to remote work during the COVID-19 epidemic.

In addition to the standard 30-day trial period, Kantree is offering an extra two months of free use, without any limitations, to all new customers who [request the extension online](#) by April 30, 2020.

“As a remote-first team, we believe that remote work is the future, but realize that it can be a challenge for companies who are new to it,” says Mr. Bouroumeau- Fuseau, co-founder of Digicoop and developer at Kantree. “Thanks to our platform, thousands of people already work remotely. We help them change work practices and provide long-term support, driven by our cooperative values. The trial extension is our gesture of solidarity towards the business community during this global crisis.”

Kantree allows teams across departments to keep track of communication, know who is working on what at all times, and easily plan upcoming projects. All this can be done 100% remotely, on any device. Kantree replaces documents and gathers information from emails, Excel and Word in one place. The flexible and easy to use the platform can be used across departments (sales, marketing, finance, business development, HR, IT etc.) and is as a mix between Trello and Airtable.

With more than 12,000 users, Kantree has been trusted by major enterprise customers in Europe and beyond, such as Orange or Thales Digital Factory in France. After nearly five years in operation, the company continues to expand internationally.

About Digicoop & Kantree

Digicoop, the company behind Kantree, was founded in France in late 2015 by a team of engineers fed up with the tools available in their former jobs. Rather than yet another cookie-cutter tool, they wanted one that would allow any other teams to get organized in their own way. Pushing their thinking further, they realized that making self-organizing businesses work required shared ownership, transparency and trust. For this reason, they decided to create one of the first employee-owned (co-op) startups.
