

Crossroads Foundation Repair Highlights The Need for Sump Pump Installation in Indiana Homes

Lafayette, Apr 13, 2020 (www.issuewire.com) - Homeowners who are in two minds about installing a sump pump in the basement can get in touch with Crossroads Foundation Repair. They are one company that highlights the necessity of sump pump installation in Indiana homes.

Homeowners are not always aware of the benefits of installing a sump pump in the basement until they find a flood situation threatening them. A flood in the basement is never a good sign. Moisture and standing water not only weakens the basement and ruins anything that is stored there, but it is also a threat to the structural integrity of the house. With the presence of water and moisture in the basement, it invites the chance of mold growth. A [sump pump installation in Indiana](#) is an excellent way to remove all the water and moisture from the basement and keep the basement dry and clean. The sump pump installation is a specialized job. Crossroads Foundation Repair has experts who can offer several solutions that fit the needs and budget of the clients.

The primary job of the sump pump is to get rid of all the moisture and standing water from the basement. It is installed in the lowest point of the basement or the crawl space. The sump pump channels all the accumulated water from the basement into a perimeter drain system. The drainage pipes are perforated, which helps in smooth water flow. The sump pump redirects all the water from the basement to a storm drain. There is a float switch that triggers the sump pump when the water reached a certain level.

Sump pumps that are available nowadays are battery-operated, or they are directly connected to the

electrical system of the house. This helps in running the sump pump even if there is no power.

Crossroads Foundation Repair brings a selection of Pro Series Pumps, which are energy efficient and work flawlessly with other basement and crawl space waterproofing systems. The sump pump installation experts help with the installation. These sump pumps are fitted with extra-large pits to allow for more water storage, as well as a sealed, clear lid for easy inspection and safety precautions. All their sump pumps come with an alarm to indicate pump failure. The sump pumps also come with a backup system so that they can be used even during a power outage.

Call them at 855-484-6820 to discuss your needs, or visit <https://crossroadsfoundationrepair.com/> to know more.
