

ISDN Software Business Partners With Stratus Technologies

Leading engineer solutions provider partners with major producer of zero-touch Edge Computing platforms based in the United States

Singapore, Apr 29, 2020 ([IssueWire.com](https://www.issuewire.com)) - **ISDN Software Business** announced today their official collaboration with Stratus Technologies, a global leader in simplified, protected, autonomous Edge Computing solutions, in providing industrial computing solutions to help customers ensure the continuous availability and predictable, peak performance of their core business applications with minimal risk.

Today, the two companies are working together to bring ISDN Software's digital transformation initiative, the benefits of Industrial Internet of Things (IIoT), and advanced analytics to industrial companies in Singapore, Indonesia and to the Philippines as well under ISDN's subsidiary company, Servo Dynamics Philippines.

ISDN Software's initiative provides edge-to-cloud integration and advanced visualization tools along with seamless access to advanced applications and powerful analytics. The partnership with Stratus means that customers can now access highly reliable, continuously available edge computing solutions as they modernize and automate their industrial environments.

For 40 years, Stratus has provided reliable and redundant zero-touch computing platforms that are simple to deploy and maintain, protected from interruptions and threats, and can be monitored and managed remotely, requiring almost no support. Stratus' ztCTM Edge, is a rugged, highly available Edge Computing platform that protects and maintains business-critical applications quickly, reliably, and efficiently in distributed, under-resourced locations. The ftServer®, a continuously available failure-prevention system, helps companies maximize revenue, quality, and productivity.

This collaboration has aligned ISDN's solutions with Stratus' platforms, bringing added security, simplicity, and peace of mind to joint customers, while eliminating the threat of unplanned downtime, financial and reputational risk.

"We are proud to be partnering with ISDN Software Business in bringing quality platforms and advanced analytics to industrial companies across the Asia Pacific region," said Edward Chow, Vice President, Asia Pacific Sales & Services at Stratus. "With the integration of Stratus Edge Computing technology, we can deliver combined solutions that protect critical data, keep applications up and running, and offer predictive servicing and secure connectivity."

ISDN Software has made great strides since it started its operations last year, making the ISDN platform better integrated and feature-rich. The platform is versatile, enabling the integration of different applications. ISDN specialises in using commercial off-the-shelf technologies and software to provide vast industry and solutions experience.

"At ISDN, we take pride in pushing boundaries by setting high standards for ourselves. This is a core value that Stratus holds in any of their business dealings with partners and their customers as well. We are proud to be working with them, and providing the technical support and expertise to our clients across the globe," says ISDN Software Business Director, Mr. GK Tay

About ISDN Software Business
